The Platinum Membership Modules and Annual Reports, Descriptions

In this booklet you will find a description of all 39+ learning modules that are included in the Platinum Membership as of the start of 2013. Occasionally, we add new Platinum Modules so the very latest Platinum Modules may not be described in this booklet. Please refer to our website for the most up-to-date number of learning modules now included with this membership. Furthermore, if you wish to learn more about the annual Platinum Stock & Asset Guide and the 40 to 70 Platinum Special Alert bulletins that we issue every year to Platinum Members, please read our Platinum fact sheet available on our webpage and at this link: http://www.smartknowledgeu.com/pdf/Platinum.pdf

MODULE 1: MoneyPing™ Analysis: Strategy No. 1 and No. 2

Do you know who the best money managers in the world are year after year after year? Hands down, there is absolutely no question in my mind who they are. Inside, we'll tell you exactly who they are (and we're pretty sure it's not who you think they are). In any event, we leverage this knowledge to dramatically decrease the downside risk of buying stocks while intelligently increasing and turbo charging your upside opportunity. Today, the risk of investing in stock markets is greater than ever due to shameless Central Bank and global commercial bank rigging of all major global stock markets. Thus, we think exposure to global stock markets should be limited only to a small handful of stocks and we'll tell you what they are.

MoneyPing™ Analysis Strategy No. 1 takes advantage of this knowledge to consistently pick winners.

Using this one strategy alone, during a two-year period after our launch, after 15 months, the performance of 13 stocks looked like this. -36.23%, +44.24%, +6.25%, +28.42%, + 56.89%, +24.77%, +26.71%, +74.88%, +65.53%, +64.21%, +30.03%, 71.33%, and 96.01%.

There is only one loser on that list and with our stop-loss strategy, that loss would have only been 15%, not 36% if we had actually invested in that company. Typically when people see returns like these, they think it can only be accomplished with extremely volatile small cap stocks that may possibly move up and down in price 10%-20% every month. This particular strategy is so effective that every single one of the 12 stocks on that list was a large-cap stock! Using my proprietary MoneyPing™ Analysis strategies, we've also outperformed the U.S. and U.K. indexes by nearly 30% during the first year of our Global Stock Picker investment newsletter (Now the Crisis Investment Opportunities newsletter).

Inside this module, I'll tell you step by step how to uncover stocks like these and reveal the specific websites we use to uncover important information needed for this strategy – we spent hundreds of hours scouring hundreds of different websites to find the best sources of information to use for our MoneyPing™ Strategy No. 1 and inside, we'll tell you what they are so you too can consistently identify stocks that will yield such returns year after year after year. I'll even tell you what these 12 stocks were so you can understand the power of this strategy. At other times, during financial crises, you likely want to stay completely out of global stock markets due to elevated risk, so we'll tell you to avoid these strategies and on which strategies in the Platinum Membership you should focus.

MoneyPing Strategy No. 2 should be used sparingly in your portfolio, representing initial positions of less than 5% of your total portfolio, but because the potential returns are so enormous, sometimes upwards of $500,000 on a $10,000 investment, they should also not be ignored.

Sometimes the only possible way to parlay $10,000 into $500,000 is to take a small initial position in a stock when it is a developmental company, before it has sold a single product and before it has a single customer. Then after it makes its first sale, add a little bit more to your position if the stock price rises, and continue to add over time as the stock shifts from being a "speculative" stock into a solid stock opportunity. Don't be misled into believing that these opportunities abound. These opportunities are very rare, but they can be discovered with knowledge of where to dig.

I normally advocate against holding speculative stocks of any kind. But there are exceptions to this rule. In certain instances, when you utilize MoneyPing™ Analysis strategies to uncover strategic stock-buying opportunities, you WILL undoubtedly uncover "speculative" companies that have the potential to revolutionize an industry. But this isn't enough for us to recommend buying the stock. Many of these plays still end up to be more hot air than reality.

In Module 1, we'll let you know how to assess the potential of "speculative" plays and how to identify the "speculative" plays that are so promising, you just don't want to pass up on them. Some of these plays will return 30% to 80% to you in just weeks, but these aren't the returns we are looking for with this class of assets. We're looking for 300%, 500% , even 1000% returns within a year to five years with these opportunities.

Again, we at SmartKnowledgeU™ spent hundreds of hours scouring hundreds of websites to find the best sources of information to use with MoneyPing™ Strategy No. 2 and inside, we tell you exactly where they are. Our strategies do not rely on luck, but rely on uncovering MoneyMites™ (the money dust trails left behind by the investment behavior of extremely powerful and wealthy individuals and institutions) to determine the best investment opportunities in the world.

Content:	24 pages
Number of Exercises:	3
Number of Lessons:	9
Exam Questions:	13
Estimated Time of Completion:	4-6 hours

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" X11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 2: MoneyPing™ Analysis: Strategy No. 3

Does doubling your money every three years sound crazy to you? If you are willing to complete all e-learning modules on this website, earning 25%, net after tax, annual returns is a very realistic goal. In fact, our Crisis Investment Opportunities portfolio has exceeded this goal, achieving a cumulative return of 176.64% since its launch in June, 2007 until year-end 2010. And earning 25% annual returns just about doubles your money every three years. Most people believe that higher returns are impossible without much higher risk. Maybe that is true using traditional investment strategies, but it's certainly not the case with our freshly minted investment strategies that we call MoneyPinging™ **a**nd you won't hear of these strategies anywhere else because we at SmartKnowledgeU™ invented them.

MoneyPing™ Analysis follows the trail of MoneyMites™ (money specks left by the investment habits of the extremely wealthy) left on the information highway to dramatically decrease risk while intelligently increasing the likelihood of earning 25% or higher returns on your investments. In fact, we're quite confident that some of our recommendations using MoneyPinging strategies will return legendary numbers in the 500% to 1000% range over the next five years. And some of these MoneyMites™ we utilize were impossible to use as recently as five years ago! In 2010, the top three stocks from our Platinum Stock & Asset guide returned

+457.14%, +346.22% and +342.11% with literally dozens more returning more than 100%, and 80% to 90% returns.

There are four major strategies that you must employ in order to give yourself a good shot at earning 25% or more annually. In this module we will review how to uncover stocks that are far superior to anything that you will own through big investment houses. In fact, if you are excited when you own a single stock or option that returns 80%, or by a stock that increases 40% in ten days, we will teach you how to routinely uncover stocks like these. By the time you complete Modules 1-5 of this e-learning website, you should be well on your way to understanding exactly how to do this.

Information technology has flattened the world of investing. Top management at companies are no longer the only ones privy to information that affects their industries and their companies, but so are you. Make no mistake about it. Fundamental analysis. Technical analysis. Both are dead. MoneyPing Analysis, a new method of researching stocks based upon the flattening of our information world, is the new paradigm, and those that continue to resist or fail to recognize this fact, including, large investment firms, will continue to yield less than practical returns for their clients.

Module 2 will teach you the third MoneyPing™ Analysis strategy that will set you on your way to financial freedom.

Content:	18 pages
Number of Exercises:	8
Number of Lessons:	2
Exam Questions:	11
Estimated Time of Completion:	4-5 days

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" * 11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 3: Paring Down the Tree – Large Cap Stocks

In Module 3, you will learn how to pare down the proverbial tree, aka, how to shrink the list of large cap stocks you uncovered with MoneyPing™ Strategy No. 3 to just the absolute best opportunities. You will learn several screens that are commonly overlooked by many experienced analysts and the reason that seemingly solid stocks can tumble in price. You will learn how to protect yourself against these risks. Furthermore, you will learn about common mistakes in the application of common screens, some of which we also apply. You will learn how to properly use and interpret these screens.

Content:	10 pages
Number of Lessons:	2

Number of Lessons:	1
Exam Questions:	7
Estimated Time of Completion:	3-4 hours

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" * 11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 5: MoneyPing™Strategy No. 4

I'm sure you have all heard of the concept of leveraging money, right? If you used a $100,000 down payment to buy an $800,000 house, then rented it out for a high enough monthly rent to cover your mortgage payments and to save for another down payment to buy another $800,000 house, this is a good example of the concept of leverage. In this example, an initial investment of $100,000 gathered $1.6 million in assets. In uncovering stock opportunities you can use leverage as well. And MoneyPing™ Strategy No. 4 will tell you how.

Strategy No.4 uses the flattening of the information world to give you an advantage in investing over all other individual investors. If you had invested in the major indexes of the U.S., from 2000 to 2006 you would have lost 13% of your money with a buy and hold strategy. In London during this time, you would have fared better, but at just a very modest 5% clip per year, and in Japan you would have just about been flat. Even with the so-called “rise” in US stock markets in 2012 into 2013, from 2001 to 2013, buy and hold strategies have returned only minimal returns over a 13-year stretch. Moving forward from 2015, with Central Banker and Commercial Banker manipulation of all major global stock markets systemic and rampant, buy and hold strategies are unintelligent and have long since been dead. One needs creative strategies to turbocharge one’s portfolio today. Inside you learn about a MoneyPing™ technique called “pinballing” that allows you to bounce off one great investment idea to uncover multiple others.

Just so there is no confusion about our MoneyPing™ trading strategies, we have never used our strategies to day trade, though it could quite possibly be used for this reason. Although we endorse long-term outlooks, sometimes our strategies do require you to trade out of a stock after a one year, or six-month holding period. So stop suffering from years of waiting and hoping and learn how to identify the assets that are most likely to significantly move higher.

Number of Lessons:	3
Exam Questions:	7
Estimated Time of Completion:	6-12 hours

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" * 11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 6: Leverage the Internet to Help You Efficiently Track Great Opportunities in Stocks and Options

Think of all the times in your life that you had forgotten something you really wanted to do – like buy a certain food at the grocery store, see a certain movie, buy a certain CD, and so on. Or in the case of investing, maybe you forgot to buy a great stock that you uncovered only to remember about it one year later after its price has already risen by 70%. This shouldn’t happen and it never has to happen again. We'll tell you exactly how to use FREE technology to organize your research so that you NEVER forget about such opportunities.

In Modules 1-5, you've learned how to leverage the flattening of the information world to find stocks with potentially explosive growth potential. In this module, you'll learn why the strategies in Modules 1-5 work so well.

Furthermore, we'll tell you specifically the websites we use to uncover great stock opportunities. After all, we've already spent hundreds of hours sorting through websites to sort out ones with useful information from those without useful information, so why should you have to? In addition, we'll let you know if blogs are worth looking at when it comes to making investment decisions and what sites are likely to contain more public relations "fiction" than fact.

Join Now and use technology to bring your investment strategies into the 21st century.

MODULE 7A: The Secret Investments That Are Ignored by Wall Street

I'm not really sure why large investment firms by and large seem to ignore such an important asset class as precious metals.

Though this investment class is truly not so secret anymore, the overwhelming majority of individual investors still largely ignore it. And this is a shame, because today, we are in the midst of one of the greatest bull runs in precious metals that will ever be witnessed during our lifetimes.

While you almost always hear about the percentages of your portfolios allocated to financial companies, biotechs, and pharmaceuticals, you almost never hear about a percentage allocated to precious metals.

That's because everybody thinks that you have to be a commodities expert to profit from investing in precious metals. The truth is that there are many, many different ways to benefit from investing in precious metals. Most people just don't know about them.

You can buy physical metal in the form of bullion bars, bullion coins, rare coins.

You can buy "paper" form in the form of precious metal exchange traded funds.

You can purchase precious metal mining companies in different stages in the precious metal cycle from exploration companies to development companies to producing companies.

You can buy junior producers or major producers.

You can buy mining company indexes.

You can buy options on these indexes.

The only problem is that most people don't know which assets above are better to buy than the others. In fact, within each category, there are considerable differences and risks. When oil takes off, while some company's shares languish well behind their earnings, with most of the majors, you can throw a dart at the board, and you'd do reasonably well. Not so with precious metals.

For example, had you invested in Barrick (one of the largest major gold producers in the world) from 2000 to mid-2006, you would have earned 60% returns. This doesn't sound so bad until you consider the fact that another major gold producer, Gold Fields, returned 370% over the exact same time frame. It's highly unlikely you would ever see such large gaps in performance between two oil majors such as British Petroleum and Chevron. But these performance differences are common in precious metals.

This same marked difference existed among the major precious metal indexes as well. At times, just over 5-year periods of time, the difference in returns between two major precious metal indexes was 150%!

Of all the investment possibilities explained above, because of the great differences in returns that exist not only among the various categories, but also within the categories, whether you invest in the proper vehicles can be the difference between a $10,000 investment turning into $13,000 or $100,000.

We tell you what types of companies present the best risk-reward setups and what companies could provide the huge homeruns but at greater speculation. We'll tell you what you need to track to understand if the company remains a good investment one year after your purchased it. Quite simply, when investing in precious metals, we provide the most comprehensive guide to intelligent decision making in this module bar none.

Think investing in precious metals, including gold, is simple? Think again. If your advisor tells you to merely buy the gold ETF, that's because most advisors have no clue as to the best way to invest in gold. And that's where SmartKnowledgeU™ enters the picture. We break everything down for you and tell you how to identify the best precious metal investments and even how to safely allocate your precious metals portfolio.

Yes, your precious metals portfolio should be well positioned with different types of investments so that you can truly benefit from any major momentum rise in this asset class. We'll make sure that you understand exactly why one company may return only 60% returns while another one will return 370% and in the process, take the guesswork out of your investments. Imagine if you went to Las Vegas or Macau to play black jack, and with every hand you were dealt, you know exactly what cards the dealer was holding. It would be much easier to win right?

That's exactly what our MoneyPing™ strategies do for you in the world of investing, even with such widely misunderstood asset classes like precious metals.

Oh and we forgot to mention, there's another special asset class among precious metals so rare that only a few companies qualify for this rating. They're among the companies we like the best and you'll find out what they are inside. I'll even provide you a special research report that tells you what is "**The Best Investment for the Next Five Years".**

MODULE 7B: The Secret Investments That Are Ignored by Wall Street

Seven more ignored asset classes

I'm not really sure but large investment firms by and large seem to ignore such an important asset class as precious metals. They also seem to ignore these other five asset classes we discuss inside the doors of this SmartKnowledgeU module.

We strongly believe at SmartKnowledgeU that during the next decade, these will be uncommon times for stock investors. We believe that a significant economic crisis will unfold that will make these five asset classes be among not only the safest classes for your money to be invested in, but among the only ones that will experience significant returns period.

While you almost always hear about the percentages of your portfolios allocated to financial companies, biotechs, and pharmaceuticals, you almost never hear about a percentage allocated to the six asset classes that we strongly believe will drastically outperform all others over the next decade.

Secret Investment A: As much as we believe in gold, this asset may actually perform much better than gold in the next decade. Though we believe there is also more risk in owning this asset, we definitely believe you'll regret overlooking it.

Secret Investment B: This asset has exploded in price over the last year but we believe the beginning of the growth cycle for this asset has just begun.

Secret Investment C: Compared to the New York and London stock exchanges, this asset is traded on a relatively small, often-overlooked stock exchange. Still, it provides one of the best, safest types of assets to own.

Secret Investment D: Big institutions and pension funds have increasingly turned to this asset over the last five years. While this asset does not have the explosive growth of our other assets, it offers more consistent growth with much less risk than any of the major developed stock market indexes.

Secret Investment E: Less than 1% of people are aware of how much the market of this asset has dramatically changed over the last decade and how these changes are almost certain to lead to steady significant, low-risk growth over the next decade. Yet this is an asset that most people use almost every day without ever giving it a second thought. In mid-2006, the combined annual revenues of the top three companies totaled less than USD $40 billion in a global market that is estimated to be $400 billion to $3 trillion.

Secret Investment F: This investment class has been around for over a decade now but the time to invest in this asset class may have finally arrived. We'll tell you why and how to safely invest an asset class that is sure to turn early investors into millionaires. The only question is "Are we too early?" If we are, our cautious approach to this asset class should mitigate much of its risk.

Secret Investment G: This asset is really just an extra bonus "discussion" as all other assets we discussed should create more than adequate wealth as conventional investors stand to lose wealth over the next decade. Just another tool for your "toolbox".

But although 99% of investors will miss out on these asset classes, the wealthiest individuals and institutions in the world have already been loading up on them just as we already have for months. Again, we have boiled down hundreds of hours of painstaking research into our 23 favorite investment opportunities including stocks and non-stock assets for you, but more importantly, we've identified phenomenal asset classes for you to track so that you can continue to identify opportunities well into the future. Don't get left behind.

MODULE 8: Little Known Tricks To Assist Your Stock Buying And Selling Decisions

If, after applying our MoneyPing™ strategies and techniques, you are still on the fence about whether or not to buy a stock, here are some additional tricks to assist you in your decision to buy or stay away from a stock. Some secret tips involve following the MoneyMites™ to understand the potential of an investment. One of these "MoneyMites™" just became accessible five years ago due to a change in securities laws. **We'll let you know of another "MoneyMite™ strategy that was not even accessible when we wrote this module in early 2006, but was finally accessible by the end of 2006**. The more MoneyMites™ you can uncover, the more the odds of making serious money off of stock opportunities increase.

Inside Module 8, we'll discuss how to assess how industry insiders and company insiders feel about the future prospects of their own stock. There are a number of ways to assess this, one intuitive, one factual. Let's look at the intuitive one first.

If you study a stock's technical charts, there are certain indicators that can improve the performance you receive from your stock portfolio if used in conjunction with our MoneyPing™ strategies. All you need is a basic, absolutely rudimentary understanding of certain technical indicators. That is all. I am by no means an expert in technical analysis, nowhere close to being one, and nor do I ever want to be one.

Being an expert in technical analysis is not necessary if you use our revolutionary MoneyPing™ strategies. But daily trading volume is one technical indicator that you should follow, and if you have completed these modules in order, you should be well familiar with its definition by now.

Abnormally high trading volume in a stock without the release of any significant news is often an indication that industry insiders are privy to information that the public is not. In addition insider buying, but not insider selling, is often a good indication of the direction a stock is going to head. Finally technical charts can assist you in knowing the proper entry points to buy and sell. So while these techniques are never my primary screens in MoneyPing™ Analysis, I call these strategies "fence jumpers".

If I'm on the fence about a particular buy or sell, often these strategies can help me decide which side of the fence is the proper side. You'll even learn how to track such signals to predict general market declines like the ones that struck in 2008. Just following simple signals could have saved most investors 10% to 30% losses in mid-2006.

In Module 8, you'll learn how to properly interpret these "secret" signals and how to avoid the pitfalls of investment newsletters that don't know how to interpret such information. As a prime example, in mid-2006 I came across a newsletter that recommended buying a Florida real estate developer in the United States whose stock had been soaring. The expert said that he was basing his recommendation based upon massive insider buys that had happened in recent weeks. He said this was a sure sign that the stock was headed higher.

Out of curiosity, I researched the inside buys myself. Not only were the "wrong" type of insiders buying, but in addition, none of them paid for their shares on the open market or paid fair market value for any of their shares. This is insider-buying information that is worthless.

Needless to say, I'm sure many of this investment newsletter's readers jumped on his recommendation and promptly proceeded to lose 30% in this stock over the next three weeks.

We'll teach you how to properly interpret insider signals in this module. Because as we've been saying throughout all of these modules, information technology has flattened the world like never before, and consequently, has enabled the individual investor as never before to identify stocks that are almost guaranteed to appreciate.

Content:	26 pages
Number of Lessons:	7
Exam Questions:	9
Estimated Time of Completion:	2 – 3 hours

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" * 11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 9: Paper Trading & Portfolio Composition for Adults

In Modules 1-8, you've learned the basic foundation and fundamental rules of our MoneyPing™ strategies that teach you how to follow the trail of MoneyMites™ to investment success. Now it's time to apply what you've learned by paper trading these strategies.

What is paper trading? Paper trading is practice trading with an imaginary account with imaginary money. But that is the only thing imaginary about it. You'll be able to see how well you do in real time, meaning today, tomorrow, one month later, six months later, and a year later. You'll be able to see if you would have lost or made money, if you were really using real money. And if you lost money, you'll be able to review your notes, and understand the decisions and reasons that caused you to lose money.

In fact, paper trading is the time you want to make mistakes and learn from them. This is the time not to be concerned so much about building "perfect" strategies and choosing "perfect" stocks. After all, you are just beginning to learn. And this learning will be invaluable when you are finally ready to invest real money. If you paper trade for three or four years, just think of how good you'll be when you finally enter the stock market for real.

Even if you're experienced enough where you feel you don't need to paper trade, we still recommend paper trading some of our MoneyPing™ strategies before conducting real trades with them due to the counterintuitive nature of some of them. For example, when we first started buying stocks with our MoneyPing™ Strategy No. 3, we discovered that many large investment houses rated our stocks as a "hold" or "sell".

Though we don't put any weight whatsoever on investment house research reports, it still made us a tiny bit nervous that we couldn't find a single major investment house that rated some of our picks as "buys", so we paper traded our strategy for an entire year. **Only after they started returning 25%, 30%, and 50% returns in a year did we realize the strength and reliability of our strategies.** Paper trading with some of our strategies first may give you the confidence you need when you start trading with real assets.

Still, if you disregard our advice, at a very minimum, browse some of the practical additional lessons contained inside, including "7 Rules for Building a Smart Portfolio", and my personal favorite, "14 Lessons You Can Learn From Navy SEALs". There are some pointers contained in these lessons that if you don't already know will most definitely improve your returns.

MODULE 10: Why Corporate Investment Firms Misinform You

This is the first of five modules in which you will learn why it is almost impossible for you to maximize the returns of your stock portfolio with a large investment house, whether it is a Wall Street firm, or a particularly well-known and respected firm in your country. Remember, that these modules apply to stock portfolio returns only, and large investment firms do offer superior access to private equity funds and foreign currency exchange rates. But this e-learning module centers around equity investments and a few special asset classes, so in this regard, we will tell you only how to protect your portfolio from the practices of large investment firms.

There are numerous reasons why the above paragraph is true, from simple economics of how financial consultants and branch managers are compensated, to how fees are structured (even on “idle” cash that may not be invested), to the relationship between investment banking and brokerage divisions of firms.

In Module 10, you will learn through simple economics and mathematics, why your account is most likely receiving far less attention than you believe, even if you have over USD $1,000,000 with a firm. **If you don’t know what we know, we guarantee you that you’re earning far less than is possible.**

Content:	10 pages
Number of Lessons:	7

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" * 11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 11: Why Corporate Investment Firms Misinform You, Part II

All large investment firms engage in misinformation campaigns designed to build a mindset of passivity and acceptance about underachieving returns in client’s stock portfolios. These misinformation campaigns are extremely clever and extremely effective. They’re designed to maximize the number of clients and the amount of assets each financial consultant can gather as well as to minimize the necessary amount of time to accomplish this. While these campaigns succeed in increasing the corporate bottom line and increasing value to the individual shareholder, they plunge the stock portfolio returns of individual clients into mediocrity while detracting from the value to individual clients.

Most people are oblivious to these shenanigans because the large investment houses have been perfecting them for over a hundred years! In the early 1900’s, J.P. Morgan formed U.S. Steel Corporation by buying Andrew Carnegie’s steel company and many others. It promptly turned a profit of USD $400 million by selling stocks and bonds worth $400 million more than the combined worth of all the companies, from which it drew a $150 million fee. Since then, profits at the expense of the individual investor have never stopped.

For years, employees at investment firms have been trained in "investment-speak". "Investment speak" has two distinct meanings. A meaning intended for their clients, and their "true" meaning, a totally different one that is known by the firm's employees. For example, for decades, an investment firm's "hold" rating really meant "sell". Everybody on this inside knew this and most people on the outside had caught on too. The reason "sell" ratings were rarely issued in the past were simple. If an analyst gave a company this mark of death, what kind of response do you think he or she received the next time he/she needed to speak to management? But there are many more examples where the public didn't know the inside meaning of "investment-speak".

So this module will break down investment-speak for you. **Learn why "prudent" in investment-speak really means "prudent" for the firm, but not "prudent" for your investment portfolio. Learn why the "modern" portfolio theory of diversification is really "stone-age" in its concepts, and why investment-speak would cause 99,999 out of 100,000 financial consultants to call one of the practices of one of the world's most successful investors stupid and risky. Learn why financial consultants' investment strategies are rarely ever different than the thundering sheep herd, and how this harms your portfolio's returns.**

In this module, you'll learn 6 lessons, that again, while universally accepted, do nothing but harm the returns of your stock portfolio. By learning to identify these strategies employed by large investment firms designed to "sell", you can learn how to prevent your financial consultant from using these same strategies to invest you into mediocrity.

Complete this module and take the first step to preventing your portfolio from being invested into mediocrity.

Content:	16 pages
Number of Lessons:	6
Exam Questions:	9
Estimated Time of Completion:	1- 2 hours

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" * 11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 12: Why Corporate Investment Firms Misinform You, Part III

In Module 11, you learned about the first 6 lessons universally accepted by the average person that harm the returns of your stock portfolio. Here, you will learn about the last 6 lessons. Again, the last 6 lessons, while universally accepted, do nothing but harm the returns of your stock portfolio. By learning to identify these strategies employed by large investment firms designed to "sell" you, you can learn how to prevent your financial consultant from using these same strategies to invest you into mediocrity.

Number of Lessons:	7
Exam Questions:	8
Estimated Time of Completion:	1 – 1 ½ hours

Note: Content Pages are measured by how many pages the content would constitute if on a standard 8.5" * 11" page, Times New Roman 12 font, not web pages as some web pages are 3-5 pages "long".

MODULE 13: Why Corporate Investment Firms Misinform You, Part IV

By now, if you've connected the dots, you've realized that it is nearly impossible for a financial consultant employed by a large investment firm to do the best possible job in maximizing the returns of your stock portfolio, no matter his strengths and his good intentions. If you're an "A" client of the financial consultant's then you receive perhaps 4 days of time per year that is exclusively devoted to your stock portfolio and if you're a "B" client, then you receive about 2 days of time per year. Even if we doubled these numbers from the absolutely reasonable calculations we performed in Module 10, we just don't see how a financial consultant can perform an above average job devoting 8 days or perhaps only 4 days per year to the decisions necessary to maximize returns in your account.

Next, if we consider that all major investment firms take anywhere from 55% to 67% of all the profits the financial consultants earn, and leaves them only with a 33% to 45% take, then we must ask, why would the financial consultant possibly stay with a firm that takes so much of the consultant's hard earned money instead of venturing out on their own?

The answer the firm always gives is that despite this absurd imbalance, financial consultants want to work for them because of the superior resources they provide to them that helps them do a better job. They provide financial consultants with analyst reports, software platforms and search tools, access to money managers, and a complete service platform for their clients in private equity, mortgages, foreign exchange products. Finally, they say, their consultants can leverage their global brand with their clients to sell more products than would be possible as an independent consultant.

But all these resources truly help a financial consultant do a better job in what?

In selling more product to their clients and in gathering more assets? Or in providing better returns to the clients in their stock portfolios?

In Module 13, we analyze each of the above reasons and determine which of them are actually worth a financial consultant giving up 55% to 67% of the money they could be retaining if they ventured out on their own. And we'll let you know if they truly help a financial consultant earn better returns for you or if it merely helps them sell more!

Furthermore, we have developed a questionnaire that you can use to screen financial consultants to determine if they are among the top 1% of financial consultants in the world or among the top 1% of salespeople in the world. The questionnaire grades financial consultants in their ability and desire in four essential areas to work around the limitations that are placed upon them by their investment firms:

(1) Buy and sell strategies;

(2) Global market knowledge;

(3) Industry sector specific knowledge;

(4) Ability to identify opportunities outside of fundamental and technical analysis.

This questionnaire was developed from more than seven years of knowledge gathered while working at large brokerage houses. The questions were carefully constructed to allow you to identify those financial consultants that are superior in utilizing the sales techniques of the firm from those that will actually be able to earn you returns that are on par with the brightest and most creative minds in the industry. If you don't have a private wealth manager but won't to know how to locate one, our questionnaire will do the job for you. Superior wealth managers will grade high in all four categories. Superior salespersons will not.

Learn whether your financial consultant is a superior salesperson or superior advisor.

Note: Page content is calculated per 8.5" X 11" pages, 12-pt. Times New Roman font text. Web pages may not correspond exactly to page content numbers as listed above, as some single web pages contain 3, 4, or 5 or more "pages" of information.

MODULE 14: Why Corporate Investment Firms Misinform You, Part V

In Modules 10-13, you learned about why you will never maximize the returns of your stock portfolio if you utilize a large investment firm to manage your money. Furthermore, you learned why it is almost impossible to find a superior financial consultant employed by a large investment firm while it is supremely easy to find a superior salesperson.

However, despite this knowledge, some people still will not have the time to apply the strategies in these e-learning modules or perhaps will not be lucky enough to find a superior financial consultant willing to take on more clients, try as they may. In this case, they may decide to still utilize a financial consultant employed by a large investment firm to manage their money.

If so, here are eight more tips that you must know to protect yourself as much as possible. The tips include conducting simple, free background checks to ensure that the firm you use and the financial consultant you use have not been engaged in fraudulent activities in the past. As well, they help you to identify major universal selling tactics of financial consultants that seriously harm the returns of your stock portfolio.

Learn how to protect your stock portfolio.

MODULE 15: Invest in Foreign Markets Efficiently & Intelligently

To maximize the returns in your stock portfolio you have to be heavily invested in foreign markets outside of your country, no ifs and or buts. If you live in America, for the rest of this decade (2010-2020), the overwhelming majority of your portfolio should probably be invested outside of the United States. At certain points in time, the strongest performance of an industry sector will be in companies that are domiciled in other countries.

And even if a sector is booming in your country, there are strong possibilities that the companies that drive this sector reside outside of your country. For example, some of the companies that feed China's energy needs are located in Australia, and Brazil, and other South American countries. Ignore the stocks in these countries and you may be ignoring some of the best opportunities in the world.

Furthermore, in times of weakening local currency, investing in foreign markets can provide additional benefits. In countries that do not have prohibitive tax structures for foreign investors, a foreign investor can benefit not only from stock appreciation but also from the strengthening of foreign currency.

Module 15 will tell you 8 crucial lessons to consider when investing in foreign markets. Furthermore, you'll learn about the many traps you need to avoid when investing in foreign markets that 99% of financial consultants fail to explain adequately.

In past years, as recently as 2004, major investment firms in the U.S. were spreading myths that investing in foreign markets was risky because they were just not performing adequate research in foreign markets to recommend individual foreign stocks. In mid-2006, when U.S. markets corrected steeply, all of a sudden, major American firms were talking about the necessity to invest in foreign markets and not to be too concentrated in domestic markets. So what happened here? Did foreign markets, in a couple of years, increase their compliance and transparency in conducting business to such a marked extent that all of a sudden, they went from being "risky" to a "necessity". Or did this change of strategy come about because it was a "marketing" necessity, and they knew that they would start to lose clients if they did not start marketing this mantra? By now, you, of course, know my answer.

Even so, many large American investment firms are still investing their clients in a manner that is more conducive to their bottom lines, investing their clients in mutual funds in foreign countries instead of individual foreign stocks. And surely, no matter what country you live in, this "sales" strategy is being employed.

Learn how you should be invested in foreign markets, and why you need to find a consultant or advisor that will invest your portfolio in the “proper” manner versus the “lazy” sales and marketing-driven manner.

MODULE 16: Why You Will Never Own the Best Stock Opportunities in the World if a Large Commercial Firm Manages Your Portfolio

Let’s quickly review some facts. There are estimated to be about 75,000 stocks traded globally, approximately 15,000 of which are traded on the U.S. markets alone. Of these 15,000 stocks, there are about 6,000 micro cap stocks and there are several thousand more small cap stocks.

According to a University of Chicago Center for Research in Securities Prices (CRSP) study that examined a 79-year period, micro cap and small cap stocks outperformed large cap stocks by 437% and 165% respectively. Investing in small companies also became safer in the U.S. in 1999 when the Securities Exchange Council (SEC) passed stricter regulations for small publicly traded companies.

However, most investment houses, even the largest corporate giants, only have the resources to only track about 1,500 stocks. They have to track the most popular stocks that most people own, so most of the stocks they research are large cap stocks such as General Electric, Microsoft, Home Depot and so on.

In fact if you look at all the stocks analyzed by ALL the Wall Street firms in the United States, this number amounts to only about one-third of the 15,000 stocks that trade only in the U.S. markets.

When you add another 60,000 foreign stocks into the mix, you can begin to see how many mid, small, micro and foreign stocks are completely ignored by Wall Street. For this reason alone, your stock portfolio will almost never experience the returns it deserves. I would estimate that more than 95% of financial consultants at large investment houses do not follow small and micro cap stocks simply because their firms do not provide adequate analysis of these types of stocks.

Why small caps? The answer is as simple as it is logical. An Ibbotson Associates study showed that over a 71-year period, from 1926 to 1996, small cap stocks returned 12.6% annually while large cap stocks returned 10.7% annually. While this difference doesn't sound huge at first, the compounding effect ensures that this difference is huge.

Without taking taxes and inflation into consideration for the sake of simplicity, $1,000 invested in a small cap stock index in 1926 would have grown into about $7,251,143 by 1996. $1,000 invested in a large cap index in 1926 would have grown into just $1,909,225 by 1996 in comparison.

All of a sudden that small difference in return does not look so small anymore.

As an example of how much large investment firms are laggards when it comes to uncovering small, micro-cap and foreign stocks, we at SmartKnowledgeU, uncovered a Chinese advertising company called Focus Media in December, 2005 using our MoneyPing™ Strategy No. 3 at an entry price of about U.S. $31 a share. In the third week of May 2006, six months later and U.S. $31 higher, a Morgan Stanley analyst put out a report, calling Focus Media a "top pick" at an entry price of U.S. $62 a share. In 2013 going forward, Chinese companies may have made their run already and it may be time to look elsewhere. The point is, markets are forever changing and one must be flexible to change strategies along with constantly shifting, dynamic global markets.

So what does this mean?

Learn to uncover the best global stock opportunities yourself here or settle for mediocre returns with a large investment house.

Content:	14 pages

MODULES 17-20 are not included in the Platinum Membership.

MODULE 21: SPECIAL REPORT – The Coming Global Crisis Part I

In this module, there are no lessons, no exercises, and no exam questions. We merely discuss how big economic changes and political changes in the world WILL affect the global stock markets for the next five years, and the actions that you should take in order to protect yourself from potentially devastating losses to your stock portfolio and to your business.

As of mid-2006 to 2015, actions of a few global economic institutions have brought the world to the brink of a teetering crisis. This almost certain development is the biggest threat to the global stock markets that you probably have never heard about. We have laid out for you the reasons why we believe this will occur in painstaking detail in this module, for without understanding why this is likely to occur, you can not know how and when you must protect yourself.

Well explain to you in great detail what has been happening with the MO, M1, M2 & M3 money supply (don't worry we'll explain inside the module, what these figures are) and what the changes in these figures mean to the future of the global economy and the global stock market.

When determining the most likely course of actions to follow from these changes, we became a student of history and discovered strong historical precedent for our current situation. What happened in the past destroyed billions of dollars of wealth but what makes our current situation today in 2015, is that compared to historical precedent, the conditions that we face today are infinitely worse than what triggered a dire economic situation in the past (if it is now 2016, 2017, 2018, etc. we update the information in all Platinum Member and modules and reports throughout the year every year.)

Acting now will protect you against a potentially massive loss of wealth. In fact, the major financial institution most responsible for this crisis, in an attempt to hide the nature of this crisis, stopped publishing in March, 2006, information that it has released for the past 20 years!

We strongly feel that it is a matter of "if", not "when", this tragic global economic crisis will unravel, and if could happen in a matter of days, weeks, or possibly months. What is more important is that we'll tell you everything you need to protect your assets when it does.

At SmartKnowledgeU™, we believe that the information contained in Modules 21-23 will help people preserve and build millions of dollars of wealth. This information has not been reported by the BBC, the New York Times, the Wall Street Journal, Reuters, or Bloomberg because it is not common knowledge. In order to uncover it, we had to scour the financials of several of the biggest global financial institutions in the world. In fact, we thought about charging USD $5,000 for these three modules alone, but at the last minute, decided to include these modules with every membership level. However, these added bonuses are subject to change and we may decide to charge separately for them in the future.

Learn how to safeguard against a hidden economic crisis.

Content:	23 pages
Estimated Time of Completion:	1 hour

MODULE 22: SPECIAL REPORT – The Coming Global Crisis Part II

This module is merely a continuation of the Special Report from Module 21. We discuss how big economic changes and political changes in the world WILL affect the global stock markets for the next five years, and the actions that you should take in order to protect yourself from potentially devastating losses to your stock portfolio and to your business.

This information will not just help you protect your portfolio but will also help steer you in the right direction regarding what global markets and what assets you will need to invest in to build real wealth over the next decade.

Learn how to safeguard against a hidden economic crisis.

Content:	29 pages
Estimated Time of Completion:	1 -2 hours

MODULE 23: SPECIAL REPORT – The Best Investment for the Next Five Years

In this module, there are no lessons, no exercises, and no exam questions. It is merely a module that discusses in great detail one of our hedge plays to prepare for the Peak Investment Crisis. We discuss many additional ways to protect your cash and your stocks in Module 7A and 7B, but here we will discuss in great detail one of the great investment opportunities of our lifetime.

Since this opportunity literally happens only once or twice every 20 to 30 years, there are many myths surrounding this opportunity as well as a scarcity of existing literature that explains how to properly invest in this asset without being defrauded. In fact just 16 years ago, the sellers of this asset held a huge advantage over buyers and dishonest sellers often did defraud buyers.

Even today, huge mark ups on these transactions still happen today, unknown to the buyer, in both sides of the buy and sell transactions. But there is no reason for this ever to happen. And we'll tell you what you need to know to ensure that you receive a fair price when buying this asset. Since there are many ways to purchase this asset, we'll also tell you what we believe to be, hands down, the best way to purchase this asset.

In fact, as of June, 2006, what is sure to be a bull run for the history books for this particular asset has already started. But it's still not too late for you to participate. Far from it. Even as of 2015, despite 4 years of ongoing corrections in gold and silver prices, we believe that the gold and silver bull have a long way to run. Moving forward from 2015, with massive ongoing volatility in Japanese, European, Chinese and US stock markets, in fact, the opportunities to build wealth through precious metals investments may be at unprecedented levels since the start of the gold and silver bull in 2001.

We literally spent hundreds of hours of research compiling just this one report. Though it is 51 pages long, initially it was over 130 pages before we edited it down to just the hard-hitting information that we know you will not read about in mainstream newspapers or hear about on TV. We don't want to waste your time giving you information that you probably already know. We dug deep down the rabbit hole and sorted through thousands of pages of documents to understand what the best investment in the world will probably be for the next five years and possibly even the next decade. But as the price behavior of this asset is little understood, we also felt it necessary to explain how this asset will most likely react in the future and how you should respond to the price changes in this asset.

At SmartKnowledgeU™, we believe that the information contained in Modules 21-23 will help people preserve and build millions of dollars of wealth. This information has not been reported by the BBC, the New York Times, the Wall Street Journal, Reuters, or Bloomberg because it is not common knowledge. In order to uncover it, we had to scour the financials of several of the biggest global financial institutions in the world. In fact, we thought about charging USD $5,000 for our Special Reports alone, but at the last minute, decided to include these modules with every membership level.

Content:	51 pages
Estimated Time of Completion:	1 – 2 hours

MODULE 24: SPECIAL REPORT – Crisis Investing

This module explains how best to handle the extra volatility of gold stocks that occur when stock markets simultaneously correct significantly. Furthermore, in this module, we explain what conditions cause short-term volatility in the prices of gold/precious metals and precious metal stocks and why paying too much attention to short-term price fluctuations instead of keeping a firm eye to the future will almost undoubtedly cause you to make the absolute wrong decisions at exactly the absolute wrong times.

At SmartKnowledgeU™, we believe that the information contained in Modules 21-24 will help people preserve and build millions of dollars of wealth. This information has not been reported by the BBC, the New York Times, the Wall Street Journal, Reuters, or Bloomberg because it is not common knowledge. In order to uncover it, we had to scour the financials of several of the biggest global financial institutions in the world. In fact, we thought about charging USD $5,000 for our Special Reports alone, but at the last minute, decided to include these modules with every membership level.

Content:	15 pages
Estimated Time of Completion:	1 – 2 hours

MODULE 25: Precious Metals Stocks Options Trading – Is it for You?

As you already know, our Platinum Course is not an options trading course but rather an investment course. The reason I added this module is that I believe the next several years will offer one of the best opportunities of our lifetime to trade options in precious metal stocks.

Content: 4 pages
Estimated Time of Completion: 1 hour.

MODULE 26: Can a Financial Meltdown Be Avoided?

Bank failures are an almost certainty (unless the U.S. gov't bails out the failing banks), credit card defaults will soar to record levels, and the U.S. Federal Reserve will reverse course at some point and begin raising interest rates. But as you well know, position yourself accordingly per the guidance in this Platinum Level course and you will stand to make a fortune from this crisis, American or not.

Content: 25 pages
Estimated Time of Completion: 1 -2 hours.

MODULE 27: Venturing Deep Inside the Investment Matrix

Content: 22 pages
Estimated Time of Completion: 1 -2 hours.

An explanation of why market behavior is often counter-intuitive and runs contrary to fundamentals in the short-term. Another look at the global currency wars that are developing and how this will affect your wealth in the future.

MODULE 28: A History of the Gold Standard

A discussion of the worldwide fractional reserve banking system, its relationship to the gold standard, and implications of a fiat currency system for the future. Also a discussion of the inevitable economic wars that will occur between East and West as Western bankers struggle to maintain their global currency domination upon the world economy for self-interest and self-profit. Free markets cannot co-exist with our current fraudulent monetary system and we explain why in this module.

Content: 25 pages
Estimated Time of Completion: 1 -2 hours.

MODULE 29: How to Avert the Greatest Financial Disaster of Our Lifetime

An explanation of why financial stocks can rally even when many of the banks in the sector are illiquid and insolvent and why following the direction of bank stocks will severely fool you at times. An explanation of the short-term gold and silver price suppression schemes of bullion banks and how you can benefit from rigged markets, instead of being scammed by them.

Content:	30 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 30: The Best Source of Information (in Precious Metals Markets) That No One Ever Consults

A close look at the best source of information about gold and silver markets that is very often overlooked and why this source of information often trumps fundamental and technical analysis when predicting and interpreting the short-term behavior of PM markets.

Content:	29 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 31: The Crisis Is Upon Us

This module discusses the implication of the bank bailout plan upon your wealth and the steps you must take to prevent the bailout plan from bankrupting your future even if the bankers attempt to do this.

Content:	32 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 32: Patience & Investing

Famed investor Jesse Livermore often said that his greatest gains were made in the waiting. An exploration of this concept and how it applies to Precious Metal markets.

Content:	15 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 33: The Fed's Attempt to Revive a Flatlining Dollar

An in-depth look at the global monetary crisis instigated by the US Federal Reserve, the deliberate nature of this banker-caused crisis, and the struggle of banks to suppress gold and silver prices.

Content:	36 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 34: The US Federal Reserve Games

Why Central Banks deliberately cause crises and a discussion of their attempt to create future crises to seize more power.

Content:	12 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 35: A Closer Look at Junior Mining Stocks

A primer in how to profit from a class of stocks that is little understood but poised to explode from 2015 forward for several years. Also, a discussion of the greatest, but easily avoidable, mistakes, that prevent investors from earning huge profits with junior mining stocks.

Content:	15 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 36: Get on Board With This Special Energy Stock

Another reminder to our Platinum Members to buy into this asset class that is flying well below the radar of almost every investor in the world.

Content:	2 pages
Estimated Time of Completion:	1 -2 hours.

MODULE 37: A Platinum Member Special Report

A very critical Platinum Member special report that discusses the proper investor psychology EVERY gold and silver investor must assume to not be fooled out of holding and maintaining positions in gold and silver assets when bankers artificially create significant volatility in PAPER gold and silver prices.

Content: 13 pages
Estimated Time of Completion: 1 -2 hours.

MODULE 38: The Rules for Options Trading

As the global banking system infrastructure crumbles and takes stock markets down with it, volatility in global stock markets will rise to enormous levels from 2013 onward. With these increased spikes in volatility becoming the "norm", there will be more danger but also more opportunity to make quick-hitting profits with options strategies. Here are the essential rules to follow when trading options.

Content: 4 pages
Estimated Time of Completion: 1-2 hours.

MODULE 39: Prepare Yourself for Failure of Global Banks Now

A very critical Platinum Member special report that discusses global bankers' plans to "Cyprus" (steal) assets from commercial bank accounts worldwide to re-capitalize a failing global bank industry, and the steps you must take NOW to avoid having your assets plundered.

Content: 9 pages
Estimated Time of Completion: 1 -2 hours.

MODULE 40: Uranium Sector Outlook

A very critical Platinum Member special report that discusses global bankers' plans to "Cyprus" (steal) assets from commercial bank accounts worldwide to re-capitalize a failing global bank industry, and the steps you must take NOW to avoid having your assets plundered.

Content: 5 pages
Estimated Time of Completion: 1 /2 hour.

SPECIAL BONUS REPORTS EVERY YEAR

Annual Platinum Special Alerts

Please note that every year, we update all the information in our modules with Platinum Special Alerts, bulletins that keep you up-to-date and relevant with all information in our Platinum Membership. In 2013, we issued 72 Platinum Special Alerts and in 2014, we issued 63 Platinum Special Alerts. In 2015, up to early September YTD, we issued 38 Platinum Special Alerts. As well as updating our outlook on gold and silver markets throughout the year, we add gold, silver and mining stocks that we uncover in these Platinum Special Alerts. Finally, if there are opportunities in global markets to gain some extra yield, we provide specific strategies in the form of shorting stock markets that are overbought and in bubble conditions as well as occasional put and call option strategies in some years when we uncover opportunities in options markets that we feel are low-risk but provide tremendous opportunities for high double-digit or even triple-digit percentage gains.

Annual and Mid-Year Platinum Stock & Asset Reports and Annual and Mid-Year Global Market Outlook Reports

Twice a year, once in January, and secondly, in the June/July time frame, we provide comprehensive Stock & Asset Reports and Global Market Outlook reports that literally take us hundreds of hours to write and many more hundreds of hours to research. We include in these reports, about two dozen major, intermediate and junior mining stocks, with our favorite stocks among explorers, developers and producers noted in each category that we trim down from literally hundreds of mining stocks that we research as the very best in the universe. Our returns prove that we consistently pick the very best mining stocks out of hundreds of stocks as we returned a +31.6% yield in our mining stocks from January to September 2015 when the Philadelphia Gold and Silver Index (of mining stocks) had lost more than -33% over the same time period. Note that the +31.6% yields we produced from gold and silver mining stocks in 2015 was during a time that gold and silver prices were down and when gold and silver stocks in general plunged more than -33%. During times when gold and silver prices were rising strongly, as in 2010, here were the returns of all 23 gold and silver mining stocks we highlighted in our Platinum Stock portfolio: ***+15.8%, +18.1%, +121.0%, +64.9%, +12.9%, +15.2%, +35.1%, -1.3%, -15.7%, +26.3%, +46.4%, +24.7%, +75.6%, +5.8%, +53.3%, +17.8%, -3.6%, +40.3%, +13.4%, -3.3%, +32.4%, +60.1%, & +3.6%.***

As an example of how detailed and comprehensively insightful are our Platinum Stock & Asset Reports and our Global Market Outlook Reports, in 2015, our beginning year reports were respectively 57 and 33 pages long and our mid-year reports were respectively 79 and 47 pages long. More than a few of our Platinum Members have sent us unsolicited emails in which they have stated that they have received the value of the Platinum Membership fee from these reports alone, outside of even our 40 Platinum Modules and our Annual Platinum Special Alert service.
